
Reg Building a Media Encoding Application

Posted by shankar.manne@gmail.com - 2008/11/20 06:52

Hi We are developing a Windows Based Application for an NGO/NPO (Non Government and Non Profit organization) to help rural people in India in doing agriculture.

Our main objective is to develop a license free and low hardware supported Media Encoding application.

I am thinking to use DirectShow Editing Services, now my concern is

1. Can i use the library in c#
2. Is there any workaround to use MPEG-2 files in application.

I am totally new to this Encoding Domain, pls bare with me if i ask a layman thing.

Best Regards
Shankar Manne
