## Visual CSharp Express project template

Posted by nicolasr - 2008/05/13 15:54

---

Hi,  
I have successfully used the project template for VCS Express as described in the blog  
"HOWTO: Silverlight and Visual Studio Express"

Only problem is:

the error list shows errors like

"The type 'UserControl' was not found. Verify that you are not missing an assembly reference and that all referenced assemblies have been built."

"The type 'Canvas' was not found..."

The project builds successfully though! Unfortunately these designer errors seem to prevent Intellisense from giving me any help while editing the XAML code.

Any ideas?

Nicolas

Hi,

Since the project builds successfully, it's a bit puzzling.

I assume that you have a reference to "System.Windows" under the References node of the project tree.

As for Intellisense, I spent two evenings trying to get it back to no avail. I create the xaml in an empty WPF project (so I can get intellisense) and the WPF designer support; when I'm happy I cut and paste the xaml in a new Silverlight project. It's not perfect but it is sufficient most of the time (in my case).
